Database

- A **database** is *an organized collection of data*.
- The **main purpose** of database is to operate large amount of information by storing, retrieving and managing.
- There are many dynamic websites on the world wide web nowadays which are handled through databases. For example, a model to checks the availability of rooms in a hotel. It is an example of dynamic website that uses database.

Non-RDBMS / NoSQL

- **NoSQL** or **Non-RDBMS** (*Non Relational Database Management Systems*) is database that is not modeled like relational model based.
- The data structure used by NoSQL databases are different from relational databases. It's faster and more flexible than relational db. That's why it's increasingly used in *big data* & *real time web application*.
- Here are the example of NoSQL database: MongoDB, Cassandra, CouchDB, OrientDB, IBM Domino, ArangoDB & Apache Ignite.

MongoDB

MongoDB is free & open source cross-platform document-oriented database. It's classified as NoSQL database & uses JSON-like documents with schemas.

MongoDB has been developed by MongoDB Inc. since 11th February 2009, and is published under GNU Affero General Public License & the Apache License.

Startup and Coding School

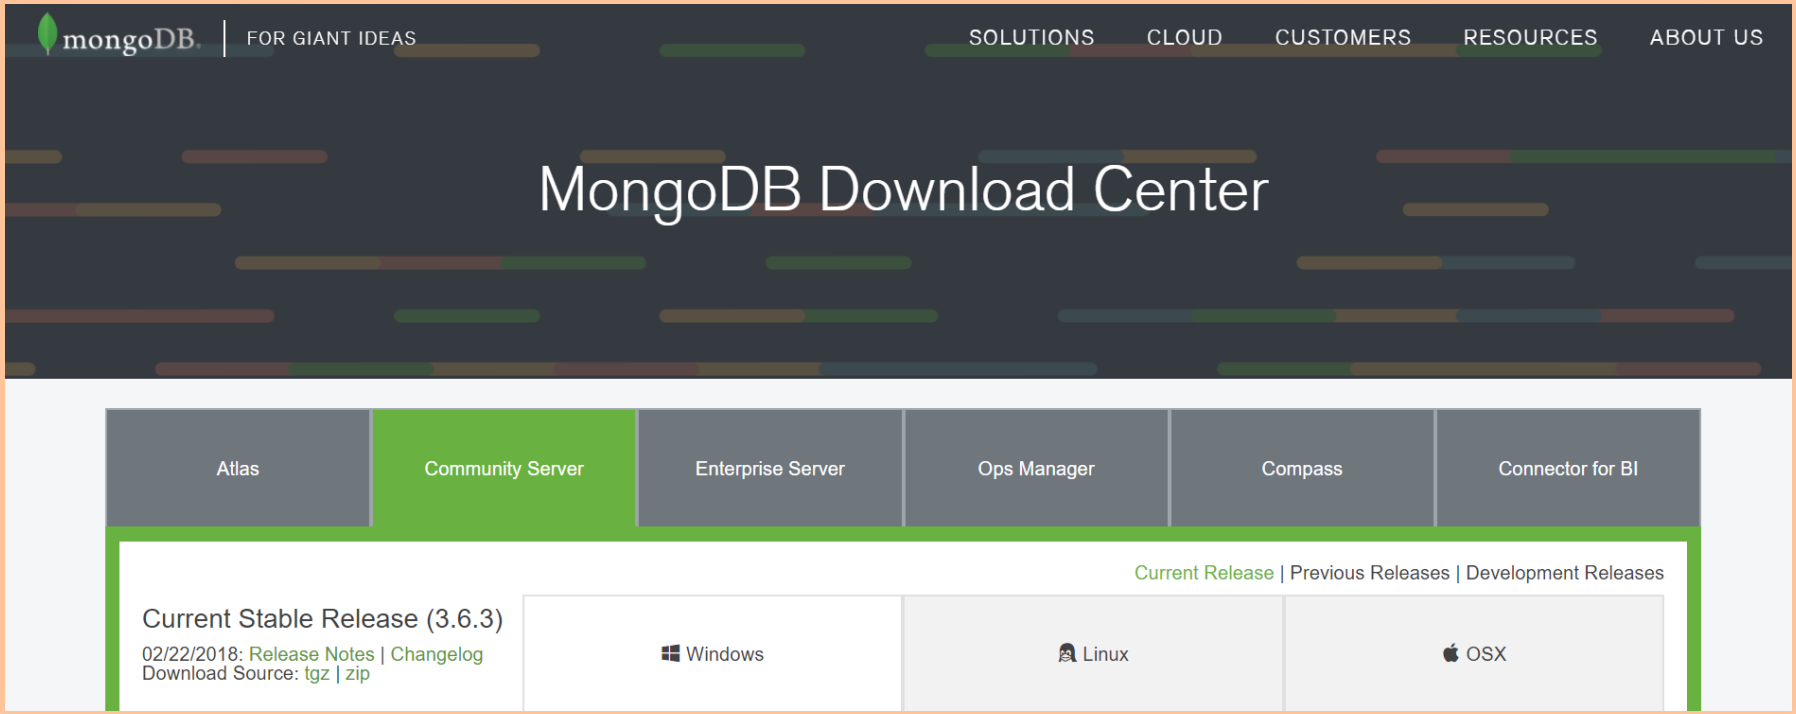
Getting Started

- Create ***data*** & ***db*** folder at ***C:/data/db***
- Download & install MongoDB



Activate Server

- Open terminal:

```
$ cd C:\Program Files\MongoDB\Server\3.6\bin
$ mongod –dbpath C:\data\db
$ mongod
```

- If OK, it will show "Waiting for connections on port 27017". Then open new terminal:

```
$ cd C:\Program Files\MongoDB\Server\3.6\bin
$ mongo
```

How to Work With MongoDB Database

Purwadhika
Startup and Coding School

mongoDB

Database

- Menampilkan daftar database:

```
$ show dbs
```

- Menampilkan db aktif (default: test):

```
$ db
```

- Membuat sekaligus menggunakan db “toko”:

```
$ use toko
```

- Hapus db “toko”:

```
$ use toko
$ db.dropDatabase()
```

Purwadhika
Startup and Coding School

mongoDB

Collection

- Membuat db user:

```
$ db.createUser({user:"lintang",
pwd:"1234", roles:["readWrite",
"dbAdmin"]});
```

- Membuat collection “karyawan”:

```
$ db.createCollection('karyawan')
```

- Menampilkan daftar collection dalam db:

```
$ show collections
```

- Hapus collection “karyawan”:

```
$ db.karyawan.drop();
```

Purwadhika
Startup and Coding School

Add Data Record

- Add 1 data JSON ke collection ”karyawan”:

```
$ db.karyawan.insert({nama:"Adi",usia:24});
```

- Add multiple data ke collection “karyawan”:

```
$ db.karyawan.insert([
{nama:"Budi",usia:23},
{nama:"Caca",usia:25}]);
```

- Menampilkan data pada collection “karyawan”:

```
$ db.karyawan.find();
$ db.karyawan.find().pretty();
$ db.karyawan.find({nama: "Adi"}).pretty();
```

mongoDB

Update

- Update **semua** property data:

```
$ db.karyawan.update({nama: "Adi"},
  {nama:"Adi",usia:21});
```

- Update property data tertentu:

```
$ db.karyawan.update({nama: "Budi"},
  {$set:{usia:26}});
```

- Update nama property:

```
$ db.karyawan.update({nama: "Caca"},
  {$rename:{"usia":"umur"}});
```

Purwadhika
Startup and Coding School

mongoDB

Remove

- Hapus 1 property dari sebuah data:

```
$ db.karyawan.update({nama: "Adi"},
{$unset:{usia:true}});

$ db.karyawan.update({nama: "Budi"},
{$unset:{usia:1}});
```

- Hapus 1 data:

```
$ db.karyawan.remove({nama: "Caca"});
```

Purwadhika
Startup and Coding School

mongoDB

And & Or

- Tampilkan data yang memiliki property value nama = Budi ***dan*** usia = 21:

```
$ db.karyawan.find({$and:
[{nama:"Budi"},{usia:21}]}).pretty();
```

- Tampilkan data yang memiliki property value nama = Adi ***atau*** nama = Budi:

```
$ db.karyawan.find({$or:
[{nama:"Adi"},{nama:"Budi"}]}).pretty();
```

Purwadhika
Startup and Coding School

mongoDB

Lower and Greater Than

- Tampilkan data yang property usianya < 25:

```
$ db.karyawan.find({usia:{$lt:25}})
.pretty();
```

- Tampilkan data yang property usianya > 25:

```
$ db.karyawan.find({usia:{$gt:25}})
.pretty();
```

Purwadhika
Startup and Coding School

mongoDB

Lower and Greater Than Equal

- Tampilkan data yang property usianya <= 25:

```
$ db.karyawan.find({usia:{$lte:25}})
.pretty();
```

- Tampilkan data yang property usianya >= 25:

```
$ db.karyawan.find({usia:{$gte:25}})
.pretty();
```

Purwadhika
Startup and Coding School

mongoDB

Limit & Skip

- Tampilkan 2 data pertama:

```
$ db.karyawan.find().limit(2);
```

- Tampilkan 1 data setelah 2 data pertama:

```
$ db.karyawan.find().limit(1).skip(2);
```

- Tampilkan 3 data setelah 3 data pertama:

```
$ db.karyawan.find().limit(3).skip(3);
```

Purwadhika
Startup and Coding School

mongoDB

Sort

- Urutkan data ***ascending*** berdasarkan ***nama***:

```
$ db.karyawan.find().sort({nama:1});
```

- Urutkan data ***descending*** berdasarkan ***nama***:

```
$ db.karyawan.find().sort({nama:-1});
```

- Urutkan data ***ascending*** berdasarkan ***usia***:

```
$ db.karyawan.find().sort({usia:1});
```

- Urutkan data ***descending*** berdasarkan ***usia***:

```
$ db.karyawan.find().sort({usia:-1});
```

Purwadhika
Startup and Coding School

mongoDB

Count

- Hitung jumlah data di collection “karyawan”:

```
$ db.karyawan.find().count();
```

- Hitung jumlah data dg prop nama = Adi:

```
$ db.karyawan.find({nama:"Adi"}).count();
```
